

Introduction to Open Refine

Bibliographical Society-IES Digital Skills day

John Rylands Research Institute, 13 March 2026

Giles Bergel

What is Open Refine?

- Formerly, Google Refine
- Free and open source, with a strong developer community
- ‘A Power Tool for Messy Data’, according to its original developer
- A means of turning *relatively* unstructured into *increasingly* structured data
- Good for editing, enriching, linking and transforming tabular data

Creating a project by importing data

Create a project by importing data. What kinds of data files can I import?

TSV, CSV, *SV, Excel (.xls and .xlsx), JSON, XML, RDF as XML, and Google Data documents are all supported. Support for other formats can be added with OpenRefine extensions.

Get data from

This Computer

Web Addresses (URLs)

Clipboard

Database

Locate one or more files on your computer to upload:

Choose files

tbltradersmain.tsv

Drag files here

Next »

Preview of the imported data

with messy data.

Configure parsing options

Separator-based files

es

ext files

s

Columns are separated by

☐ commas (CSV)

☒ tabs (TSV)

☐ custom \t

☐ Use character " " to enclose cells containing column separators

☒ Trim leading & trailing whitespace from strings

Escape special characters with \

☐ Ignore first

0

line(s) at beginning of file

☒ Parse next

1

line(s) as column headers

☐ Column names (comma separated)

☐ Discard initial

0

row(s) of data

☐ Load at most

0

row(s) of data

☐ Attempt to parse cell text into numbers

☒ Store blank rows

☒ Store blank columns

☒ Store blank cells as nulls

☐ Store file source

☐ Disable auto preview

Cluster and edit column "Town"

Find groups of different cell values that might be other representations of the same thing. For example, "New York" and "new york" likely refer to the same concept and just differ by capitalization, and "Gödel" and "Godel" probably refer to the same person. [Find out more...](#)
